

Check the [Charge Profile List](#) and see if your battery is listed.

- Algorithms may work well with other manufacturers' batteries of similar type and capacity. These ranges are listed in the "May Be Compatible With" column.

If your battery does not appear on the "Charge Profile List" you can select an appropriate algorithm using the [Application Chart](#) below:

- Narrow by battery type: Flooded, AGM, or Gel.
- Choose an algorithm with an Amp Hour range which matches your battery (all ranges in the table are the C/20 or 20-hour rate found on battery datasheets).
- There may be more than one algorithm for that size. Normally one algorithm will be more "generic" than the other.
- Test the algorithm by cycling your battery and ensuring it fully recharges it and provides sufficient runtime.

Battery Group Battery Capacity (C/20 Ah)	Group 31										12V Golf										8V golf										6V Golf										L16
